ANTH 171: MONKEYS AND APES, Fall Quarter 2016, 4 credit hours (satisfies an SC requirement)

Course Time & Location (Lecture): Monday and Wednesday 2:00-3:20 pm, 182 Lillis Hall (LIL)
Instructor: Dr. Nelson Ting
  Office Hours: Wednesdays 10:00 am-12:00 pm & by appointment (in 302B Condon Hall)
  E-mail: nting@uoregon.edu

Graduate Employees (GE):
Diana Christie  
Office Hours: Th 12-2  
Office: 365D Condon Hall  
Email: dianamchristie@gmail.com

Chris Harrington  
Office Hours: M 3:30-5:30  
Office: 365 Orange Condon Hall  
Email: charrin3@uoregon.edu

Kylen Gartland  
Office Hours: W 3:30-5:30  
Office: 304 Condon Hall  
Email: kyleng@uoregon.edu

COURSE DESCRIPTION
This course serves as an introduction to the primatology curriculum in the Department of Anthropology and fulfills a General Education requirement in Science. It will provide a broad survey of the evolutionary biology of our closest relatives, the non-human primates. Because these animals are closely related to humans, they share with us an array of important adaptive features such as high intelligence, complex communication systems, diverse feeding adaptations, and a reliance on social groups. Understanding their ecology, behavior, and evolution thus helps anthropologists interpret these shared features and provides insight into what makes us different as humans. We will learn about the evolutionary forces that have shaped primate diversity, the principles we use behind classifying these animals, the evolutionary history of the group, the various unique and interesting adaptations found across different primate species, and the primary extinction threats that these animals face in the wild.

LEARNING OBJECTIVES
Students will learn the basic evolutionary concepts that shape biological diversity as well as the foundations needed to enroll in our advanced primatology courses. By the end of the term, students will know the divisions within the primate order, the characters that are used to identify these divisions, the different behavioral adaptations found across primate species, and the factors that threaten primates with extinction.

COURSE FORMAT
The course is divided into two halves. The first half will be devoted to the basic theory and concepts we use to explain primate biology, while the second half will focus on the various adaptations found among the different species. This will include a combination of lectures and required laboratory sections. The required laboratory sections are a critical part of the course and are designed to develop practical skills of observing, measuring, and interpreting data collected by biological anthropologists.

CANVAS
A Canvas site will be maintained for this class, which will be your main source for course information, documents, and announcements. Make sure that you regularly check your Canvas-linked e-mail account.

ACCOMMODATIONS
Appropriate accommodations will be provided for students with documented disabilities. Please make arrangements to meet with Dr. Ting or your GTF to discuss these accommodations.

REQUIRED READINGS
1) Redmond. 2011. The Primate Family Tree, Firefly. (Available at the Duckstore)
2) “Genetics and Evolution” (Available on Canvas)
   http://www.nature.com/scitable/knowledge/library/sexual-selection-13255240
6) “Primate Lives” (Available on Canvas)
9) “Primate Adaptations” (Available on Canvas)

**EXPECTATIONS AND GRADING**

Regular attendance at lectures and laboratory sections, as well as participation in laboratory activities, is required. Course readings are required and are essential to passing exams, completing lab assignments, and participating in lab section activities. Your grade in the course will reflect performance on: a quiz; midterm exam; final exam; discussion section attendance; a lab practical; and a short write-up of 5 laboratory exercises.

- **Quiz (Week 4)** 10%
- **Midterm Exam (Week 6, October 30th)** 25%
- **Lab Practical (Week 8)** 10%
- **Final Exam (December 7th, 2:45 pm)** 30%
- **Lab Section** 25%

The midterm and final exams will cover lectures, readings, videos, and lab section materials. Exams will include multiple choice, matching, and short answer sections. The final exam will emphasize material from the second half of the course, but will make extensive use of concepts and terminology from the first half. Exams and assignments must be taken/turned in at the scheduled time—under no circumstances will make-up exams or assignment extensions be given without a documented excuse (e.g., signed note from your doctor). If you will not be able to take an exam or turn in an assignment, you must notify me in advance (preferably by e-mail).

Material on the exams may be different than that presented in the textbook, and may only be covered during class lecture and lab sections. Therefore, you are advised to arrange to obtain course notes if you miss a class. If you have questions after you have gone over the notes, please contact your GTF or me.

Grades will be assigned as follows: A = 90-100%, B = 80-89%, C = 70-69%, D = 60-69%, F < 60% (with minus and plus grades assigned at appropriate cutoffs).

The grading system used in this course is as follows:

- **A** – Outstanding performance relative to that required to meet course requirements; demonstrates a mastery of course content at the highest level.
- **B** – Performance that is significantly above that required to meet course requirements; demonstrates a mastery of course content at a high level.
- **C** – Performance that meets the course requirements in every respect; demonstrates an adequate understanding of course content.
- **D** – Performance that is at the minimal level necessary to pass the course but does not fully meet the course requirements; demonstrates a marginal understanding of course content.
- **F** – Performance in the course, for whatever reason, is unacceptable and does not meet the course requirements; demonstrates an inadequate understanding of the course content.
